Find the volume of the solid generated by rotating the region bounded by the curves $y=x^2$ and y=1 about the x-axis.

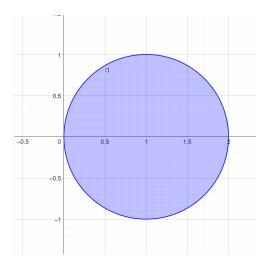

The region bounded by the curves $y = \sqrt{x}$ and $y = x^2 + 1$ between x = 0 and x = 1 is revolved about the y-axis. Find the volume of the solid generated.

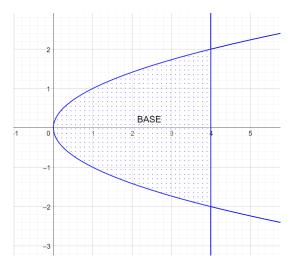

Find the volume of the solid generated by rotating the region bounded by the curves $y = x^3$ and $x = y^2$ about the line y = -1.

The area enclosed by the circle $y^2 + (x - 1)^2 = 1$ is rotated about the y-axis. Find the volume of the resulting solid.

The base of a solid is bounded by the curves $x = y^2$ and x = 4. The cross sections of the solid, perpendicular to the x-axis, are semicircles. Find the volume of the solid.

A solid has a base lying in the first quadrant and bounded by the curves $y = 4 - x^2$, x = 0 and y = 0. If the cross sections of the solid perpendicular to the y-axis are equilateral triangles with the base running from the y-axis to the curve. Find the volume of the solid.
